

Step 1 – Create the Phases (Summary Tasks)

1. Open **Microsoft Project**.
2. In the **Task Name** column, type the four phases as **summary tasks**:
 - a. Initiating Phase
 - b. Planning Phase
 - c. Performing Phase
 - d. Closing Phase
3. To make them summary tasks, leave them at the top level (do not indent yet).

Step 2 – Add Example Tasks Under Each Phase

Initiating Phase

Task	Duration	Notes
Identify project need	2 days	Indent under Initiating Phase
Select project	2 days	Indent under Initiating Phase
Approve project charter	0 days	Milestone (indent under Initiating Phase)

Planning Phase

Task	Duration	Notes
Define project scope	3 days	Indent under Planning Phase
Identify resources	2 days	Indent under Planning Phase
Develop schedule	3 days	Indent under Planning Phase
Develop budget	3 days	Indent under Planning Phase
Identify risks	2 days	Indent under Planning Phase

Performing Phase

Task	Duration	Notes
------	----------	-------

Execute tasks	Varies	Indent under Performing Phase
Monitor progress	Varies	Indent under Performing Phase
Control changes	Varies	Indent under Performing Phase

Closing Phase

Task	Duration	Notes
Final deliverables approved	0 days	Milestone
Conduct project evaluation	2 days	Indent under Closing Phase
Document lessons learned	2 days	Indent under Closing Phase
Archive documents	1 day	Indent under Closing Phase

Tip: Use **Indent Task** button in MS Project to make tasks part of a summary task.

Step 3 – Assign Durations

- Enter the **durations** for each task in the **Duration** column.
- Milestones: enter **0 days**.

Step 4 – Add Dependencies

1. Use the **Predecessors** column to link tasks:
 - a. Each task depends on the previous task in the same phase.
For example, Select project → predecessor = Identify project need.
 - b. Each phase depends on the **last task of the previous phase**.
For example, Define project scope (Planning) → predecessor = Approve project charter (Initiating).

Tip: MS Project will show arrows in the Gantt chart once dependencies are set.

Step 5 – Add Milestones

- Ensure milestone tasks have **0 days duration**.
- They will automatically display as **diamond symbols** in the Gantt chart.

Step 6 – View Gantt Chart

- Switch to **Gantt Chart View** in MS Project.
- Check that:
 - Phases are **summary tasks**.
 - Tasks are **indented** under the correct phase.
 - Milestones are shown with **diamond symbols**.
 - Dependencies are displayed as **arrows**.

Deliverable

- Save your project as **ProjectLifeCycle.mpp**.
- Ensure all **phases, tasks, milestones, durations, dependencies, and Gantt chart view** are correct.
- Submit the **.mpp file** for assessment.
